

Filling last-minute openings

Less chasing. Clearer turns.

8–12

last-minute cancellations each week

20–30

clients on the waitlist

Today, spreadsheets and texts make it hard to know who has the next turn.

Lena's estimates. Website shown with sample clients and simulated messages.

For Lena and Carla • Local prototype

One client gets a clear turn

01 Match the opening

Service, stylist and availability must fit the whole appointment. Oldest waitlist entry goes first.

02 Wait, then move on

Each client normally gets 15 minutes. A decline or timeout moves to the next person automatically.

03 Confirm one booking

A current “yes” confirms. Late replies cannot take the next client’s turn. Their overlapping offers are withdrawn.

Actual demo: Alex timed out, then Sam accepted.
This scenario uses a shortened 20-second timer.

Staff can see when help is needed

A failed message pauses outreach.

Lena or Carla can see the client and phone number, record a phone response, or explicitly move on. No automatic retries.

The history stays visible.

Staff can stop or fill an opening. A canceled booking needs explicit reopening. The final cutoff closes unresolved openings.

Actual demo: simulated delivery failure and staff controls.

What works today, and what is simulated

Working locally

Matching, ordered offers, response deadlines and booking safeguards run in the prototype.

Temporal preserves the queue, timers and history when the page closes or the worker restarts.

Staff can review outcomes and act on failures from one dashboard.

Prototype boundaries

SMS is simulated. Sample clients respond through the on-screen client preview.

Square updates stay manual, as Lena requested. Staff still checks external bookings for conflicts.

No real client portal, secure staff login or public deployment is included.

A small rehearsal before a live pilot

Proposed next step

Lena and Carla try five sample openings together.

Rehearse the moments that matter

A timeout followed by acceptance.
A failed message and phone handoff.
An overlapping offer and a late reply.

Agree on the pilot's success checks

Fewer staff checks and texts.
More eligible openings filled.
No conflicting bookings or unclear turns.

After the rehearsal, review the results before adding real SMS and secure access for a supervised pilot. Square changes remain staff work.
